

# Dräger X-plore 1330 Filtering face piece FFP3

ST-1100-2005

To meet the demands of today's industrial workplaces, Dräger has developed a new range of filtering face pieces, the Dräger X-plore 1300 Series. With end-user requirements in the forefront, the focus of this respirator series is safety and comfort. The result: a comfortable, ergonomically designed filtering face piece for use against solid or solid and liquid particles. Advanced filter media combined with a modern design guarantees maximum comfort, safety and user acceptance.

Whenever respiratory protection for dust is needed, e.g. working with stainless steel and demanding laboratory applications, Dräger X-plore 1330 filtering face pieces provide you with a perfect solution.

Major features include the pre-attached, adjustable, elastic head harness with a built-in safety stop preventing the straps from sliding out of their clip. An all-around comfort face seal ensures a secure seal and added comfort.

The climate control comfort valve is on each mask, and reduces moisture and hot air build-up inside the mask, allowing you to breathe easier.

Dräger X-plore 1330 filtering face pieces are available in two sizes for optimum fit and come individually packed for cleanliness and hygiene.

Discover the benefits of Dräger X-plore 1330 for yourself.
